

Pulse Health Group Ltd – Carbon Reduction Plan

Publication date: June 2025

Baseline and Current Emissions Footprint

Baseline emissions are a record of the greenhouse gases that have been produced in the past and were produced prior to the introduction of any strategies to reduce emissions. Baseline emissions are the reference point against which emissions reduction can be measured.

Baseline Year: 2024

Additional Details relating to the Baseline Emissions calculations: The base year was calculated using all available data from our facilities and operations. Data collection methodologies follow GHG Protocol corporate standard guidelines and use appropriate Government emission conversion factors.

Scope	Category/Definition	Description of source	Emissions (tCO ₂ e) Baseline year (2024)
1	Direct emissions from owned or controlled sources	Combustion of fuel, and leakages of refrigerant	22.7
2	Indirect emissions from the generation of purchased electricity, steam, heating, and cooling	Generation of electricity consumed (on a market basis)	10.3
3	Indirect emissions including supply chain, travel, and waste	Upstream and downstream activities, travel, commuting, waste, etc.	97.2

**Current Reporting Year: 2025 (up to May '25)**

Scope	Category/Definition	Description of source	Emissions (tCO ₂ e) Reporting year (2025)
1	Direct emissions from owned or controlled sources	Combustion of fuel, and leakages of refrigerant	11.5
2	Indirect emissions from the generation of purchased electricity, steam, heating and cooling	Generation of electricity consumed (on a market basis)	3.9
3	Indirect emissions including supply chain, travel, and waste	Upstream and downstream activities, travel, commuting, waste, etc.	34.3

Emissions Reduction Targets

Pulse Health Group Ltd is committed to achieving net zero emissions by 2030. We define Net Zero as the state where a balance between anthropogenic greenhouse gas (GHG) emissions and removals is achieved, by taking the following actions:

- Measuring 100% of the organisation's GHG emissions
- Reducing GHG emissions as far as possible
- Offsetting remaining emissions through projects that remove carbon from the atmosphere in the long term

Carbon Reduction Projects

We have implemented the following initiatives since the baseline year:

- Transitioned to paperless systems where possible
- Installed smart meters across key locations
- Optimised use of energy in facilities

We plan to implement further initiatives such as:

- Full transition to LED lighting
- Expansion of electric vehicle fleet and infrastructure

PULSE HEALTH GROUP

- Improve building insulation and HVAC efficiency
- Engage with suppliers to reduce upstream Scope 3 emissions

Declaration and Sign Off

This Carbon Reduction Plan has been completed in accordance with PPN 06/21 and associated guidance and reporting standard for Carbon Reduction Plans. Emissions have been reported and recorded in accordance with the published reporting standard for Carbon Reduction Plans and the GHG Reporting Protocol corporate standard and use the appropriate Government emission conversion factors for greenhouse gas company reporting.

Scope 1 and Scope 2 emissions have been reported in accordance with SECR requirements, and the required subset of Scope 3 emissions have been reported in accordance with the published reporting standard for Carbon Reduction Plans and the Corporate Value Chain (Scope 3) Standard.

This Carbon Reduction Plan has been reviewed and signed off by the board of directors.

Signed on behalf of Pulse Health Group Ltd:

Vaishnavi Gudivada

Director
